

ACADEMY

Sign up for our WATCHOUT Certified User training course and let us inspire you!

This 2-day training starts from the basics and moves into more advanced topics, allowing the participants to learn by using practical examples with hands-on programming and tasks. After successfully completing the course and set tasks, the user will have achieved entry-level operator skills in Dataton WATCHOUT software.

Duration: 2 Days

Learning objectives

After the training, you will be able to:

- navigate and understand the WATCHOUT interface
- understand the setup necessary for a WATCHOUT show with multiple displays
- use basic features of WATCHOUT such as timelines and media
- understand the full potential of the product and how it may be applied in different contexts
- plan, install and use WATCHOUT in a multi-channel display solution
- use more advanced features of WATCHOUT, such as auxiliary timelines, alpha/keying, and blend/geometry correction, compositions
- understand and use virtual displays, tiers and control and interact with external units such as DMX
- understand basic 3D mapping processes
- perform rudimentary trouble-shooting.

Target audience

Show operators, event planners, project managers, installation engineers, integrators, service and maintenance engineers, consultants and integration planners, product specialists, sales engineers.
